

Splitter PLC Controls Conversion – Encoder

This controls conversion is designed to replace existing controls, and to use in conjunction with Encoder Flat Bar positioning.

Benefits and Features:

- Menu driven setup from Operator Interface. Faster setup between product runs.
- Better positioning of product. More accurate splits.
- Replaces disk & cams for setup. More production.
- New product can be set without cam plates. Easier to adjust.
- More readily available parts. Saves Money.
- Provides feedback for position of flightbar and product.
- Electrical with no mechanical trips.
- Upgrades controls to latest technology.

Kit Includes:

Drive shaft
Encoder mount
Coupling
Cover plate
Encoder
New Control Panel with;
Operator Interface
Allen Bradley SLC processor
Completely built, loaded with program
Wire harness with wire numbers

Minimum requirements:

924 or 1224 Splitters only. Works with gearbox drive or direct drive motors. Splitters must have Roller Deck Infeed.
